

FastClad

Hillside Gardens MMC Project for Lambeth Borough Council

The Brief was a simple one, replace a row of derelict garages behind two blocks of existing dwellings, but the logistics of developing such a confined site inevitably led to a MMC solution.

Pre engineered panels were delivered to site and erected by the main contractor Axis Europe and readied to receive the FastClad

The FastClad was then installed and pointed by Gypcraft after the envelope had been made watertight so scaffold could be struck

EH Smith Clay Products sourced the First Quality Facing brick which would satisfy the planning requirements for this landmark project. The bricks were delivered to our factory, cut and bonded to our FastClad backing board, then returned to site for mechanical install. A combination of Stretcher Bond and Stack Bond was achieved to give a modern aesthetic with the use of a traditional clamp fired stock brick.

FastClad with its BBA Certified minimum service life of 50 years, hard and soft body impact resilience, real brick aesthetic and QA processes was the best solution.
